

## **Number Representation**

1. Decode the following ASCII code:

Hint: Convert the binary numbers to decimal number(ASCII). Then look up the ASCII table to find the corresponding symbols.

1000111 1000101 1001111 1010010 1000111 1001001 1000001

2. Write the following word in ASCII using an 8-bit code with the leftmost bit always 0.

CoMpUteR

3. On a sheet of paper, using character → ASCII → binary conversion similar to #2 write a short message in binary. Exchange messages with your partner and decode each other's message.

4. Do a reverse conversion of your solution from #1 to verify your results. The conversion would be from character → ASCII number → binary number

Char	Dec	Char	Dec	Char	Dec	Char	Dec
(nul)	0	(sp)	32	@	64	`	96
(soh)	1	!	33	A	65	a	97
(stx)	2	"	34	B	66	b	98
